STORMTECH PTY LTD

ARCHITECTURAL GRATES AND DRAINS

COMPANY PROFILE

With a rich history spanning over 30 years, Stormtech has been a pioneer in providing innovative architectural drainage solutions to architects and designers. Its products have applications in various settings such as bathrooms, showers, thresholds, paved areas, driveways, pools, and pool surrounds. Renowned for sleek design concepts, innovation and practicality, Stormtech's offerings have become synonymous with premium quality and reliability.

PRODUCTS AND SERVICES

Stormtech's linear drainage systems are crafted from high-grade 316 stainless steel, with its Good Design Award-winning Wave Grate made from anodised aluminium, to ensure durability and longevity. Manufactured in Australia, these systems are available as made-to-length or modular units, offering flexibility in installation. The range comes in three standard widths: 38mm, 65mm, and 100mm. Custom fabrication is also available to meet specific project requirements.

All Stormtech drains are designed to seamlessly connect with standard plumbing fittings, and hold Watermark and Gold GreenTag International certifications.

Slot drains | Featuring a 25mm top opening with 20 slots draining into a concealed 90mm drainpipe.

Special assemblies | Utilising UPVC channels connected via downpipes at 200mm intervals to sockets in a drain below, offering superior drainage capacity.

Other products | Linear drainage systems, threshold drains, vinyl clamps.

Custom design and fabrication available.

COMPOSITION AND MANUFACTURE

Slot drains and special assemblies are all manufactured from PVC. All grates are stainless-steel and manufactured in Australia. Stormtech's attention to detail and comprehensive support ensure that projects are executed seamlessly, meeting both aesthetic and functional requirements.

ATLANTIS INTERNATIONAL CORPORATION

STORMWATER MANAGEMENT SYSTEMS

COMPANY PROFILE

Since 1986, Atlantis International Corporation has been a pioneer in sustainable urban infrastructure, delivering innovative solutions that help shape greener, more resilient cities around the world. With a legacy spanning nearly four decades, Atlantis has established itself as a global leader in water-sensitive urban design and environmentally responsible landscape engineering.

Recognised internationally for inventing the world's first drainage cell system, Atlantis continues to lead the industry through the development of advanced solutions including modular underground stormwater tanks, permeable paving systems, lightweight void fill, vertical gardens and green roofs. Its products are designed to address the evolving challenges of urbanisation, stormwater management, sustainability and climate resilience.

As a designer, manufacturer and supplier, Atlantis combines engineering expertise with environmental innovation to create practical solutions that improve the performance, longevity and sustainability of urban spaces and infrastructure. Its systems support water conservation, groundwater recharge, urban cooling and greener built environments while meeting the demands of modern construction and infrastructure projects.

Backed by decades of research, technical expertise and global project experience, Atlantis collaborates closely with architects, engineers, landscape architects, builders, developers and councils to deliver integrated solutions tailored to each project's unique requirements.

The Atlantis philosophy is simple: create cities that work more like natural ecosystems capturing, filtering, storing and reusing water while increasing vegetation, reducing environmental impact and improving urban liveability for future generations.

Atlantis®
GREEN CITIES FOR LIFE

PRODUCTS AND SERVICES

Atlantis International Corporation designs, manufactures and supplies a comprehensive range of sustainable landscape and urban infrastructure solutions, including:

Drainage cells | Advanced drainage and soil support systems that improve water management, root health and structural performance.

Modular underground stormwater tanks | High-capacity stormwater detention, retention, infiltration and reuse systems engineered for urban environments.

Permeable paving systems | Sustainable paving solutions designed to reduce runoff, improve water infiltration, and support water-sensitive urban design outcomes.

Lightweight void fill solutions | Engineered lightweight fill systems that reduce structural loads and improve construction efficiency across a range of applications.

Vertical gardens | Delivering innovative living wall systems that enhance building aesthetics, environmental performance and occupant wellbeing.

Green roof systems | Integrated green roof solutions that improve thermal performance, reduce urban heat island effects, and introduce valuable green space into dense urban areas.

COMPOSITION AND MANUFACTURE

Sustainability is embedded throughout Atlantis' manufacturing and product development processes. Wherever possible, its systems are manufactured using recycled and environmentally responsible materials, including recycled plastics and sustainable aggregates, helping reduce environmental impact while supporting circular economy principles.

Atlantis products are manufactured using advanced production technologies and precision engineering processes to ensure consistent quality, durability, and long-term performance. Every system is developed to meet the rigorous demands of modern construction while delivering practical environmental outcomes for projects worldwide.

SVC PRODUCTS PTY LTD

SPECIALISED PRODUCT SOLUTIONS FOR STORMWATER DRAINAGE AND CIVIL INFRASTRUCTURE

COMPANY PROFILE

Since 1948, SVC Civil has steadily built a reputation as a trusted supplier of high-quality precast concrete and supplementary products for drainage and council infrastructure. SVC offers a wide range of standard products, including access covers, steel grates, kerb lintels and subsurface products, while servicing clients spread across the civil construction, engineering and infrastructure sectors and local government works.

With many decades of expertise operating in the civil industry, the SVC team is equipped with the tools and capability to produce tailor-made solutions for specific design applications and site requirements. All made-to-order products are manufactured following a rigorous design and production process to ensure compliance with the necessary industry standards, including VicRoads and council specifications.

SVC is certified against the globally recognised ESG standards of ISO 9001, ISO 14001 and ISO 45001, demonstrating the business' ongoing commitment to quality, safety, continuous improvement and environmental considerations.

PRODUCTS AND SERVICES

SVC Civil manufactures the following high-quality products for road infrastructure projects:

- Precast concrete pits
- Covers
- Kerb lintels
- Jersey barriers
- Rail foundations
- Stormwater detention systems
- Trade waste systems
- Civil accessories
- Subsurface products

In addition, SVC also supplies the following products for stormwater and cabling applications:

- Ductile iron and lightweight polymeric access covers
- Galvanised steel grates
- Complementary accessories

COMPOSITION AND MANUFACTURE

SVC's diverse suite of precast concrete products is made to the highest quality standards, ensuring consistent performance, excellent strength characteristics and long-lasting durability.

SVC is committed to reducing its environmental impact, investing significantly in the use of recycled materials in its products including slag, fly ash, rainwater, manufactured sands and aggregates made from soft plastics.

DURHAM DRAINAGE PRODUCTS

THE LEADERS IN CIVIL, STORMWATER AND UTILITY PRODUCTS

COMPANY PROFILE

Durham Drainage Products id committed to delivering high-quality precast concrete drainage solutions that combine strength, durability and reliability with the flexibility to meet each project's unique requirements.

With over 75 years of supplying the civil construction industry across Australia, Durham has established itself as a trusted manufacturer of both standard and custom precast concrete products. As a supplier experienced in meeting the requirements of major infrastructure authorities, including Transport for NSW & Sydney Water projects, the team understand the importance of compliance, quality and consistency.

PRODUCTS AND SERVICES

Durham specialise in the highest quality production of cast iron, ductile iron, galvanised mild-steel, stainless steel and reinforced precast concrete drainage, sewer and water quality products.

This includes:

- Stormwater
- Sewer
- Electrical
- Communication
- Roads and highways
- Rail
- Ports
- Airports
- Gas
- Oil
- Infrastructure

Durham has an extensive range of products available to suit a variety of applications, from pedestrian traffic (Class A) and main roads (Class D) to airport and taxiway requirements (Class G).

Durham's in-house manufacturing capability allows it to deliver both standard products and fully customised solutions with the flexibility today's projects demand.

IRRIGATION AUSTRALIA LIMITED

ASSOCIATION PROFILE

Irrigation Australia is Australia's peak irrigation organisation representing members from the entire supply chain of the irrigation industry, including water providers, manufacturers, irrigation design consultants, system installers, irrigation managers and irrigation training services. Irrigation Australia is a registered training organisation (RTO: 91313) under the name Irrigation Training Australia, providing the industry with nationally accredited training and qualifications.

With its network of members around Australia, Irrigation Australia can help develop or locate the skills needed to efficiently manage irrigation in an urban landscape.

Irrigation Australia's services include:

- Providing up-to-date technical and industry information via its quarterly journal, *Irrigation Australia*, and a fortnightly eNews.
- Developing and delivering competency-based training and non-accredited short courses for those working within the industry.
- Managing the industry's professional certification program. The program recognises skills and knowledge in a number of disciplines such as irrigation retailing, design, operation, auditing and installation. Irrigation Australia's website includes a directory of certified industry members so customers can locate their closest irrigation professional.
- Access to a network of industry members in all sectors with significant experience, knowledge and expertise in all facets of irrigation.

URBAN IRRIGATION

Green landscapes provide significant benefits for urban communities, including:

- Environmental benefits | The key environmental benefits of green landscapes are: cooling effects on buildings, which help to reduce energy consumption; improving urban stormwater management by reducing peak flows and runoff pollutant loads; maintaining soil structure and preventing erosion; and maintaining biodiversity in urban areas.
- Social benefits | These are related to better health and community outcomes, such as: preventative healthcare, including stress reduction, depression management and avoidance of obesity; childhood development in parks and open space, providing a commons for social interaction and cohesion; and benefits associated with organised sport.
- Economic benefits | Increased property values.

Urban irrigation is fundamental to achieving these urban greenspace benefits. A well-designed, installed and operated irrigation system that delivers the right amount of water to a landscape, to the right place at the right time, will maximise these benefits to both property and to the wider community.

IRRIGATION STANDARDS

It is generally acknowledged that standards in the irrigation industry are important in establishing measures of best practice and influencing performance. At a practical level, adopting standards will lead to improving irrigation water management and water use efficiency.

Industry standards are established through applying technical standards (ie. performance standards for equipment), technical codes of practice (ie. practices such as design, installation and operation), and professional standards.

PROFESSIONAL DEVELOPMENT

Allied with the development and application of standards, professional development is fundamental to improving the skills and knowledge of those in the industry and, as a result, the credibility of information provided to customers and how efficiently water is used.

Since its establishment more than 35+ years ago, Irrigation Australia (then the Irrigation Association of Australia) has recognised the importance of professional development and spent significant resources in developing and organising activities and events designed to support knowledge and skills training. As a result, Irrigation Australia offers members and industry professionals access to a range of courses and workshops, including irrigation hydraulics, irrigation efficiency, irrigation pumps, Certificate III in Irrigation Technology (AHC32419) and Certificate IV in Irrigation Management (AHC41119), and an introduction to urban irrigation in Australia.

As a service to members and to promote skills development, the Irrigation Australia website has also established a Centre of Irrigation Excellence (COIE), a partnership between Irrigation Australia as the peak industry body for the irrigation industry and some of the leading irrigation industry suppliers, to provide a platform that facilitates, oversees and coordinates irrigation industry knowledge, training and development.

CERTIFICATION

Another important aspect of Irrigation Australia's role in promoting professionalism in the industry is its certification program. The aim of the certification program, which has been developed in consultation with Irrigation Australia members, is to recognise the skills of those involved in the industry and improve professional standards. Certification is based on nationally recognised competencies that form the basis of irrigation qualifications at entry, trade and supervisory levels.

Irrigation Australia's certification program is one that recognises skills in a number of disciplines such as designing, contracting, installing, operating, managing, retailing, providing advice and auditing.

Some of the program benefits include:

- Certified individuals who express their commitment to excellence by participating in a process to assess their knowledge can be confident that they are doing the job right, and this can bring advancement and recognition.
- Employers know that staff members who are certified have the skills for the occupation.
- Customers know when they use a certified irrigation specialist to install or run their systems, those people have the skills to install or operate or manage a system efficiently, effectively and with the least environmental impact.

The program is also underpinned by a Code of Conduct for certified irrigation professionals, to ensure ongoing integrity, knowledge and compliance with industry standards, as well as a complaints process.
