ROCKS PLUS

LANDSCAPE ROCK, PEBBLE AND ROCK PAVER SUPPLIER FOR RESIDENTIAL, GOVERNMENT AND COMMERCIAL PROJECTS

COMPANY PROFILE

Rocks Plus is dedicated to providing customers with unsurpassed service and value by stocking a wide range of rocks, pebbles and sawn rock pavers and steps. An extensive product range offers a variety of choices to meet different landscaping applications, including but not limited to retaining walls, water features, swimming pool surrounds, dry and running creek beds, public amenities, school grounds and gardens.

Located in the eastern suburbs of Melbourne, Rocks Plus has a dedicated fleet of company vehicles to service Melbourne and the surrounding suburbs, as well as selected regional areas. The company's experienced, knowledgeable and friendly staff are available to assist in selecting that special feature rock or provide advice on a broader landscape project.

An impressive five-acre display site makes the extensive range of products on offer easily accessible, while the beautiful onsite landscape displays showcase the best way to use these products in a natural landscape setting.

Rocks Plus is the established supplier of choice for many local councils, developers, landscape contractors and architects.

PRODUCTS

As specialists in natural rocks, pebbles, and sawn rock pavers and steps, Rocks Plus offers:

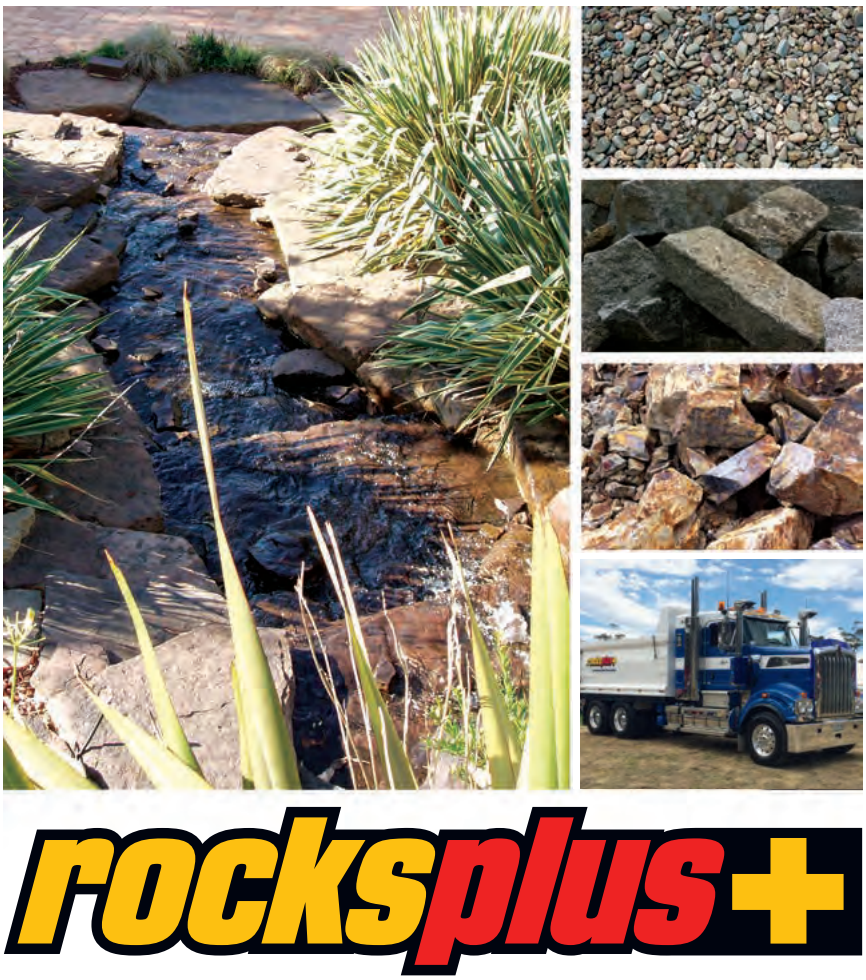

- Mudrock, basalt, Daylesford slate, Dromana brown, pink, yellow and bronze granites, blocky salt and pepper granite, blasted salt and pepper granite, Colac honeycomb, castella black, coldstream, honeycomb, gabion walling rock, crazy pave, tuscan toppings, river pebbles, firewood, landscape logs and poles.
- A range of rocks, pebbles and sawn rock pavers and steps in a variety of shapes, colours, textures and sizes.
- Rocks ranging from basketball size up to 2m. Larger landscaping rocks can be supplied upon request.

EARTHLIFE PTY LTD

MANUFACTURE AND SUPPLY OF MICROBIAL ROCK MINERAL SOIL CONDITIONERS AND FERTILISERS

COMPANY PROFILE

Earthlife is an independently owned company based in the Garden City of Toowoomba, Queensland. Since 1996, Earthlife has been providing new-technology microbial rock minerals for agriculture, horticulture and domestic landscapes.

Earthlife products were developed by leading soil scientists and microbiologists, and offer an easy, affordable alternative to chemical and manure-based soil conditioners and fertilisers.

Using the Earthlife system results in treated areas being more resilient, recovering faster from weather extremes and impact from foot traffic. They require less fertilisers and amendments, less watering and spraying and, overall, less inputs, which leads to a potential for a higher profit due to fewer follow-ups and less outlay.

PRODUCTS

Earthlife supplies a range of fast-acting clay breakers and soil conditioners that are ruminant, pet-friendly and contaminant-free, making them ideal for schools, childcare centres, aged-care facilities and more. The range includes:

- Garden Mate | Fast-acting, no-dig clay breaker that replaces gypsum, lime and Dolomite while improving drainage and soil biology.
- Garden Delight | Vegan-friendly soil conditioner packed with minerals and humus to boost microbes and build long-term fertility.
- Veggie Mate | Balanced mineral blend for nutrient-rich, pest-resistant veggie crops in commercial beds or raised planters.
- Flower Blend | Enhances bloom development and soil health. Ideal for seasonal displays, borders and high-traffic garden areas.
- Lawn Blend | Low Nitrogen, slow-release, restores compacted turf, enhances lateral growth and improves water efficiency — animal and children safe.
- Fruit Blend | Improves flowering, fruiting and plant resilience. Especially effective for citrus, stone fruit and orchard setups.
- Break Down | Speeds up composting and organic matter decomposition for quicker bed turnover and cleaner maintenance.
- Native Blend | Low-input support for Australian natives, encouraging strong growth while preserving natural plant integrity.
- Cactus Mate | Tailored nutrition for succulents and dryland plantings; supports healthy growth with minimal watering.

COMPOSITION AND MANUFACTURE

Earthlife products are manufactured using locally sourced volcanic rock minerals, combined with rare earth minerals, providing a combination of 60+ natural elements for improved and on-going plant nutrition and health.

Combined with over 30 strains of beneficial soil microbes, cultured and added on-site to deliver nutrients and improve soil structure for long-term sustainable soil health.

Earthlife Rock Minerals

SHAPESCAPER®

MODULAR STEEL LANDSCAPING PRODUCTS

COMPANY PROFILE

Landscape Engineering Pty Ltd design and manufacture a comprehensive range of innovative steel landscaping products under the emerging ShapeScaper® brand.

PRODUCTS AND SERVICES

ShapeScaper® offers an extensive range of Australian-made and -designed garden edging, box planters and planter rings featuring a modular design with predrilled holes that make onsite installation quick and easy. Efficiently create durable and attractive borders or raised garden beds in either weathering or galvanised steel.

All ShapeScaper® products incorporate smooth rounded edges for added strength and safety. ShapeScaper® steel garden edging is suitable for installations ranging from DIY renovations through to high-end residential and complex large-scale commercial projects, with a choice of either 1.6mm, 2.0mm or 2.5mm-thick steel.

All lengths are supplied complete with predrilled connector plates and screws. The edging system is completed with predrilled heavy-duty stakes designed to suit each profile. Select from a choice of eight profile heights: 75mm, 100mm, 150mm, 185mm, 230mm, 290mm, 390mm and 590mm. All lengths are 2400mm long. Lower profiles can easily be shaped onsite into angled bends or flowing curves. A custom shaping service for all profiles is also available if required. ShapeScaper® prerolled steel rings and planters are available in a large range of sizes that are extremely quick and easy to install.

The unique ShapeScaper® modular planter design incorporates smooth, rounded edges with a 40mm top and 20mm return rim for added strength and safety. Planters are supplied in two halves that are easily joined. The planters can be combined with a range of stock extender lengths and corner pieces to create an unlimited range of custom designs.

ShapeScaper® engineered retaining wall panels are available in 3mm thickness. REDCOR® weathering steel is available in 500mm, 700mm and 1000mm heights. The prepunched 75mm x 75mm x 5mm steel retaining posts sit hidden behind the retaining panels, making this system an aesthetically pleasing alternative to traditional sleeper and post retaining walls.

The ShapeScaper® range of steel landscaping products has been designed to take the hassle out of installation. It is easy to transport, requires no welding or drilling and the edging is supplied with all fittings and heavy-duty stakes that won't bend.

COMPOSITION AND MANUFACTURE

All ShapeScaper® products are Australian-made from Australian BlueScope Steel.

Edging is available in either 1.6mm, 2.0mm or 2.5mm REDCOR® (CW300A) AS/NZS 1595:2002 (weathering steel) and GALVABOND® (G2 Z275) AS 1397:2021.

TRANSROCK

NATURAL LANDSCAPE, WALLING STONE AND SAWN ROCKS & PEBBLES

COMPANY PROFILE

Transrock supplies natural landscape rock, walling and buidling stone, sawn rock, paving and pebbles from one of Victoria's most comprehensive display yards. It supplies trade landscapers, civil contractors, landscape architects and government and institutional projects acrss Victoria, from a single feature stone to multi-thousand-tonne civil packages.

Delivery is handled entirely in-house by a fleet spanning 2m³ tippers through to 27m³ truck and dog, supported by on-site excavators and telehandlers for loading oversize feature rocks and tight-access sites.

The full range is displayed in landscape settings at the Wonga Park yard and the team can assist architects and designers with selection, sizing and specification for any project.

PRODUCTS AND SERVICES

Natural rock is inherently varied and that personality is what sets rock apart from manufactured products. At the Transrock yard every stone can be hand-selected for shape, colour and character. It stocks naturally weathered stone from Victoria - a combination of quarry-sourced and sustainably-sourced rock.

Choose from:

- Pink mudstone
- Honey granite
- Little Desert sandstone (exclusive)
- Coldstream
- Basalt
- Sawn basalt paving, steps and seats
- Sawn honey granite
- Gabion rock
- Pebbles and toppings
- Supply 'sound' rock to meet Section 108 durability requirements
- Supply and placement of erosion protection rock to meet Section 713 compliance
- Waterway beaching and rockwork to meet Melbourne Water requirements
- Hand-selection of feature stone
- Victoria-wide delivery by company fleet

STRAIGHTCURVE®

MODULAR STEEL GARDEN EDGING, RAISED GARDEN BEDS AND PLANTERS

COMPANY PROFILE

Straightcurve® has been designing, manufacturing and supplying high-quality, pro-grade, modular steel garden edging, raised garden beds, retaining panels and planters since 2015.

The Straightcurve® range is precision-engineered to ensure a consistently high-end finish. Every product is designed to be easy enough to use that even first-time DIY gardeners can install them quickly. This saves skilled professional landscapers time and money when using this versatile product, while designers and clients are assured consistent high-quality, lasting results on every project.

Straightcurve®'s unique connection and bracing systems provide a strong no-shunt hold in a simple-to-use system that can be installed up to three times faster than the alternatives.

PRODUCTS AND SERVICES

Manufactured from high-quality steel, Straightcurve® provides a reliable, efficient, durable and aesthetically pleasing way to define landscaped boundaries or create raised containment structures.

Straightcurve products are specified and used by architects, designers, builders and landscape contractors throughout Australia. The entire range is optimised for use in high-end domestic, commercial and civil projects.

STRAIGHTCURVE® BENEFITS

- Effortlessly connect and strongly brace edges for stress-free installation.
- Save time and money by eliminating custom fabrication and on-site welding.
- Unleash creativity with a wide range of cross-compatible products.
- Deliver beautiful, safe and child-friendly designs.
- Use a family of high-quality steel landscaping products sharing quick-connect and easy install DNA.
- Improve overall aesthetic and liveability of homes, gardens and other landscaped spaces.

WHY USE STRAIGHTCURVE® WEATHERING STEEL?

Straightcurve® Weathering Steel products are precision-engineered for a strong hold. Material selection and manufacturing are ISO-certified to maximise quality and lifespan. Weathering steel develops a protective patina that lends a rustic aesthetic to landscaping projects.

WHY USE STRAIGHTCURVE® GALVANISED STEEL?

Straightcurve® galvanised steel products are made to the same high standards as weathering steel. Galvanised steel offers a more contemporary aesthetic and is more suited to coastal environments or projects using bore water.

COMPOSITION AND MANUFACTURE

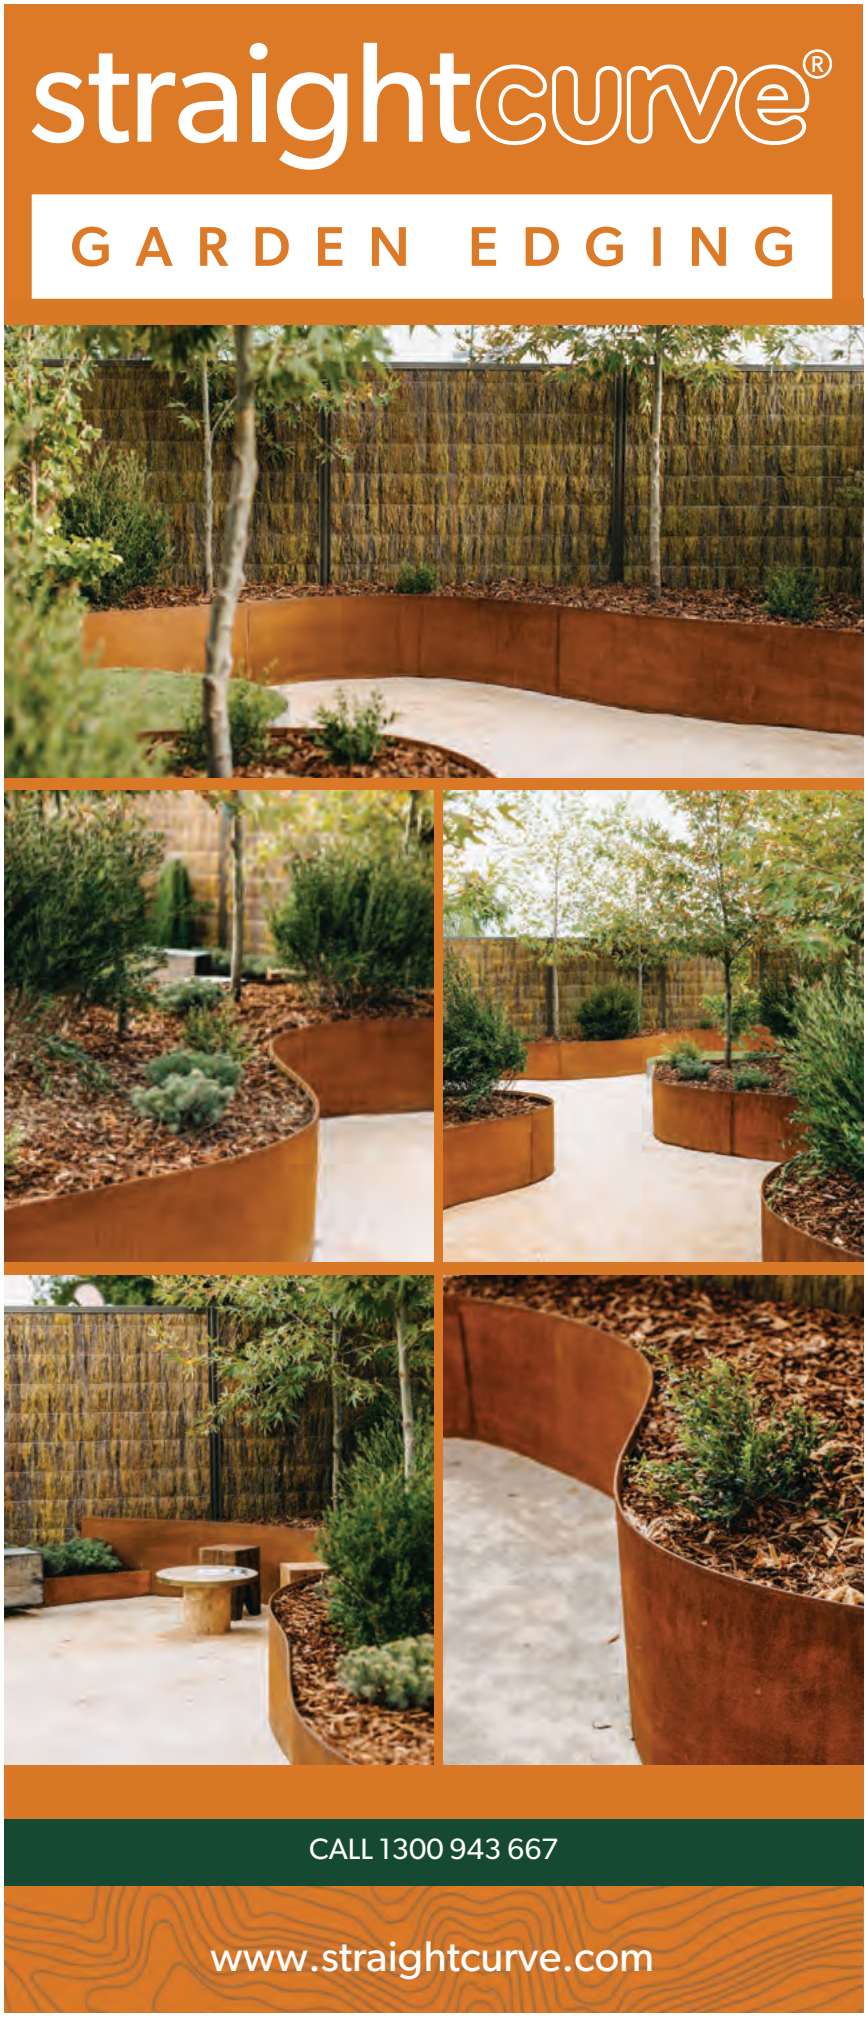

Steel thickness | 1.6mm (garden edging) + 2.0mm (raised beds and planters)
Profile heights | 75mm, 100mm, 150mm, 240mm, 400mm, 560mm.
Steel finish | Weathering steel and galvanised steel
Applications | Garden edging, raised garden beds, retaining, terracing and planter boxes.
Profile styles | Flex (smooth curves), Rigid (straight lines or gentle curves), Zero-Flex (perfectly straight lines)

SERVICEABLE AREAS

Australia, New Zealand, USA, UK and mainland Europe.

BENEDICT SAND & GRAVEL

LANDSCAPE AND BUILDING SUPPLIES

COMPANY PROFILE

Proudly Australian and family owned since 1966, Benedict is a leading supplier of recycled and quarried products, setting itself apart as a true end to end provider.

Bendict produces its own products, manages quality and compliance, as well as handling delivery directly to site. Benedict offers a fully integrated service customers can trust. With deep technical experience, Benedict connects customers to the right material for its intended use and ensures reliable transport to assist with project deliverables.

QUALITY YOU CAN COUNT ON

Benedict operates to AS/NZS ISO 9002 Quality Standards and is recognised as the supplier of choice to small and large projects alike. The company offers next day delivery for bulk materials across the greater Sydney metropolitan area and beyond. Thanks to a highly reliable fleet of trucks, Benedict's extensive range of standard and custom-designed products are delivered on time, every time.

Call 02 9986 3500 when you need:

Sand | Landscaping, drainage and building works

Soil | Top dressing, turf underlay blends

Organic soil and mixes | Gardens, planter boxes and commercial growers

Biofiltration profiles | Filter media, transition sands and drainage gravel

Road bases | Compactible fill and recycled concrete

Boulders | Sandstone and basalt

Gravel | Construction and decorative gravels

Compost | Soil improvers and mulches (AS4454)

GRANGE GROWING SOLUTIONS

GROWING MEDIA MANUFACTURER

COMPANY PROFILE

Grange Growing Solutions (GGS) designs and manufactures growing media to suit any application. Currently the largest supplier to the nursery and garden industry in NSW, the GGS philosophy is to consult with the customer on all aspects of the proposed job before undertaking the construction of media.

GGS is quality assured by SAI Global under AS3743, NIASA- and Eco Hort-accredited by Greenlife Industry Australia. All media produced undergoes testing, and a sample is kept to ensure quality control.

With a dedicated fleet of delivery vehicles, GGS is able to handle bulk orders and can contract package into various bag sizes. GGS also imports Polyon controlled-release fertiliser.

PRODUCTS AND SERVICES

- Growing media
- Polyon controlled release fertiliser
- Certified media for organic production
- Technical support and consultation
- Custom-designed blends specific to application (eg. greenwall and greenroof media)
- Specialised formulae for hard-to-grow varieties
- Contract packaging including bulka bags
- Exporting

COMPOSITION AND MANUFACTURE

Grange Growing Solutions holds three separate accreditations, meaning all batches of growing media produced are of the highest standard. Working surfaces are made of concrete, and water is filtered through sand-activated carbon then passed through UV light.

GGS has its own inhouse laboratory where testing of raw materials and finished mixes is conducted.

SOFT LANDSCAPING

LAWN & TURF SUPPLIES

THIS CHAPTER PROVIDES INFORMATION ON

Lawn Alternatives/Synthetics | Lawn/Turf Growers
Lawn/Turf Installation | Spreading Services | Turf Underlay

FROM THE TURF AUSTRALIA PRESIDENT

The many benefits of natural turf have been confirmed in recent Australian research. They include:

- **Has a cooling effect** | The temperature on a green lawn in midsummer can be 10°C less than bare soil, 20°C less than asphalt, concrete or pebbles, and 40°C less than synthetic grass!
- **Is environmentally friendly** | Turf improves water quality by filtering runoff and reducing erosion. Turf also reduces greenhouse gases by absorbing carbon dioxide and producing oxygen.
- **Promotes wellbeing** | Open greenspace promotes physical exercise and improves mental health.
- **Uses less water than you'd think** | With five main turf types and many different varieties to choose from, drought tolerant and water-efficient options are available. Turf also grows well using recycled water and water saving crystals.
- **Is a natural product** | Turf self-replenishes, provides a natural fire barrier, reduces noise and increases home values (up to 18 percent).

Given these various benefits, it is not surprising that the turf industry in Australia annually produces 38 million square metres of turf with a farm-gate value of $280 million.

The industry services two main market segments:

- Residential and property development
- Commercial, including sporting fields, parks, roadsides etc.

Turf is grown and harvested year round in all Australian states and territories, and turf farmers sell direct to the end user or consumer. This ensures turf can be purchased for considerably less than alternative ground covers.

To find out more about the benefits of natural turf, visit our website.

Bec Sellick | President, Turf Australia

TURF AUSTRALIA

INDUSTRY PROFILE

Turf is a natural, sustainable product that enhances the environment, keeps the Australian outdoor lifestyle active, and is an integral part of modern landscapes.

Turf is available Australia-wide and the use of sophisticated harvesting equipment and delivery processes makes it easy to specify in any landscape.

The turf industry is responsive to consumer demand and has a range of cultivars to suit general purposes as well as specialist needs, such as sporting fields, high-use areas, seaside gardens and waste water treatment facilities. New cultivars are more drought tolerant than cool climate grasses and will grow quite well on non-potable (grey) water and in part-shade conditions.

Turf Australia is the national peak industry body for growers and invites all to be involved. Turf Australia was formed in 2004 to support the growth of the industry as well as the profitability of its members.

INFORMATION

Turf Australia has valuable resources on turf selection and management. The industry has a website that contains fact sheets, hints and tips, and general information on the benefits of turf. For more information visit *turfaustralia.com.au*

In addition, Turf Australia distributes an industry eNewsletter and quarterly industry magazine. To receive a copy send your request to *admin@turfaustralia.com.au*

MEMBERSHIP

Membership to Turf Australia is by application, which is available from the Turf Australia office or online at *turfaustralia.com.au*

Turf Australia
Grow Green

ODS | OUTDOOR DESIGN SOURCE

Ecovia Turf

FROM THE TURF QUEENSLAND PRESIDENT

Turf Queensland is the recognised industry body in Queensland, working in conjunction with Turf Australia to outline the benefits of greenspace to families, local council, government and developers.

Water issues continue to face all our turf producers across the state. As a landscape industry we are continuously faced with changes in weather and challenged to improve all the time. Water security and water-use efficiency are high on the agenda across the turf production sector and we continue to work with the regulatory authorities in support of efficiencies through best management programs.

Turf Queensland look for every opportunity to be at the forefront of efficiency research. Programs like the Farm Water Futures project enable our growers to continue to improve.

Erosion control is a major issue on construction sites and with Great Barrier Reef Marine Park protection. Fortunately, considerable third-party investigations into the benefits of natural turfgrass in erosion control have proven positive. Back in 2017, we saw the release of an Australian Standard for erosion control that provides guidance to specifiers on this important issue.

Turf Queensland promotes ongoing innovation and activities through regular workshops and field days, where we continue to promote Workplace Health and Safety and Biosecurity issues throughout the industry.

Precision Agriculture and the uptake of various disciplines of related technology continue to show benefit on turf farms and the uptake is increasing at excellent levels, indicating the professionalism of the industry.

Turf Queensland third-party audited accreditation is now gaining headway with many local regional councils and landscape architects specifying its use in the tender process.

President, Turf Queensland

TURF QUEENSLAND

ASSOCIATION PROFILE

Operating for over 20 years, Turf Queensland represents the growing professional industry of turf production in the state. In undertaking a Strategic Development Plan, Turf Queensland supports the growth of turf production, in a sustainably professional manner, as an intensive agriculture sector across Queensland.

As the recognised Queensland industry support for turf production, the development of the Association's core purpose was undertaken based on the needs identified within the industry body.

As is the case with all industry associations, the development of member benefits was paramount, together with addressing the various issues identified by members through the inclusive research of the Strategic Plan, which provided considerable direction for the Executive of the Association.

As an integrated industry, with over 100 turf grass producers across the state — covering approximately 2500ha and providing a gross state product of $280 million per annum — it is critical that Turf Queensland work alongside related stakeholders, sponsors, research institutions and members to continue the growth of professionalism, industry best practice and awareness of this key industry supplier to our main pillar industries, which include environment, construction, agriculture and natural resources, to name a few.

Turf Queensland Accreditation is the first business accreditation program in Australia. It is third-party audited and a transparent process, providing the purchaser with the confidence that their product has met a standard or criterion created through improvement in the turf industry.

Accreditation provides differentiation and recognition based on achieved competency standards. Turf Queensland is happy to advise that a number of councils are utilising the *Turf Accreditation Program* (TAP) and requesting proof of compliance (copy of current certificate). Brisbane City Council, the biggest council in Queensland, is included.

WHAT IS TAP?

Turf Queensland continues to lead the way in driving professional best practice outcomes through our *Turf Accreditation Process* (TAP) — the first in Australia.

- TAP is a third-party audited program with credibility
- TAP is a business improvement program to benefit the producer
- TAP provides instant recognition of a quality supplier
- TAP provides a recognised standard of product to the end user

ECOVIA TURF

INNOVATIVE AND ECO-FRIENDLY ARTIFICIAL TURF SOLUTIONS

COMPANY PROFILE

Ecovia Turf is a leader in sustainable artificial turf solutions, proudly offering the first and only fully recyclable mono-material synthetic turf system in Australia. With over 17 years of on-site expertise, Ecovia specialises in delivering durable, environmentally responsible and innovative turf systems for parks, playgrounds, commercial developments and recreational spaces.

Ecovia's mission is to transform the artificial turf industry by reducing landfill waste, supporting circular economy principles and delivering products that meet the highest environmental, safety and performance standards. The Ecovia team values honesty, reliability and clear communication, ensuring customers receive premium solutions backed by a 12-year warranty.

Manufactured from a mono-material polyethylene composition, Ecovia's turf systems support full recyclability while eliminating the need for latex backing and other potentially harmful additives. The products are free from latex and harmful toxins, supported by Environmental Product Declarations (EPDs) and comply with strict REACH regulations relating to Substances of Very High Concern (SVHC). Combined with a significantly low fire rating, the systems are ideal for a wide range of commercial and indoor applications.

PRODUCTS AND SERVICES

As a licensed QBCC company, Ecovia Turf provides end to end artificial turf solutions, offering:

- Supply of ONE-DNA™ artificial turf
- Installation of artificial turf systems using qualified in-house installation teams
- Tailored solutions for schools, parks, playgrounds, public spaces, commercial properties, and high-traffic recreational environments
- Comprehensive site preparation, including excavation, base stabilisation and drainage systems
- Project management for complex installations, ensuring seamless execution and premium project outcomes
- Landscaping works including retaining wall construction, earthworks and fence installation
- Installation of EPDM rubber soft-fall systems for areas requiring compliance with critical fall-height standards, including parks and playgrounds

COMPOSITION AND MANUFACTURE

Ecovia Turf's artificial grass systems are manufactured entirely from polyethylene, creating a mono-material solution designed for durability, recyclability and long term circularity. Manufactured for global markets and climates, the systems achieve up to a 90 percent lower carbon footprint compared to conventional turf products containing polyurethane or latex backings.

Featuring a fully permeable backing system, Ecovia Turf's products also deliver superior drainage performance, making them ideal for high traffic commercial, recreational and landscape environments.

The products comply with strict global standards, including REACH regulations for Substances of Very High Concern (SVHC), supporting long term safety, environmental responsibility and performance.

PLANT TILES AUSTRALIA

WHOLESALE NURSERY

COMPANY PROFILE

Plant Tiles are an innovative solution for creating lush, green spaces quickly and easily. Consisting of pre-grown, ready-to-use sections of plants, these can be laid down like tiles to instantly transform any area into a vibrant, living landscape.

Unlike traditional planting methods, Plant Tiles provide an immediate visual impact. There is no waiting for seeds to sprout or plants to grow, simply lay down the tiles and the result is an instant garden. Plant Tiles are a revolutionary way to add greenery to any area swiftly and effortlessly.

PRODUCTS AND SERVICES

Plant tiles are essentially modular plant units, each containing a variety of healthy, mature plants embedded in a lightweight, soil-like substrate measuring 330mm x 330mm x 22mm. These tiles are designed for easy installation, allowing the covering of surfaces with minimal effort, with each tile covering the same area as more than ten 100mm pots of ground cover plants. The tiles come in various types featuring different plant species suited for specific environments.

Ease of use | Plant Tiles are designed for simplicity. They can be installed by anyone, regardless of gardening experience. This makes them perfect for urban dwellers, busy professionals or anyone looking to enhance their space without the hassle of professional gardening.

Versatility | Propagated with alternative lawns and ground covers, the Plant Tiles can be cut to shape and laid to create instant landscaping solutions. Plant Tiles can be used to provide full coverage, hardy ground covers for high traffic areas, no-mow lawns, living mulches or cut into strips to put between pavers.

Low maintenance | The plants the tiles are made up of are chosen for their hardiness and low maintenance needs. This creates a beautiful green space with minimal upkeep required.

Environmental benefits | Plant Tiles contribute to better quality by absorbing carbon dioxide and releasing oxygen. They also help in reducing the urban heat island effect, providing a cooling effect in built-up areas.

Aesthetic appeal | Beyond their functional benefits, Plant Tiles offer a stunning visual enhancement to any space. They bring the beauty of nature closer, creating serene and inviting environments that can improve mood and wellbeing.

History | After being conceptualised, developed and commercialised, Plant Tiles began selling in 2016, and are the only company in the world to do so. The company has expanded twice due to the high demand of the unique product in the landscaping and horticultural fields.

Plant Tiles focuses on the propagation of low, ground cover plants. Supplying to retailers, gardeners, landscapers, developers and builders.

PROJECTS

Plant Tiles have been used in multiple award winning show gardens, including many in the Melbourne International Flower and Garden Show.

PARADISE PLANTS

EASY-CARE PLANTS FOR AUSTRALIAN GARDENS

COMPANY PROFILE

Paradise Plants has been breeding exciting new plants for Australian gardens for more than 40 years. All Paradise branded plants have been rigorously tested to ensure trouble-free gardening in both residential and commercial settings.

Paradise is well known for creating tough, reliable, beautiful plants that stand the test of time. The Paradise range is available Australia-wide via a broad network of wholesale growers.

PRODUCTS

There are more than 100 Paradise plant varieties available throughout Australia, including:

Paradise Camellia sasanqua collection | Upright, Petite and Slimline ranges

Paradise Photinias | Super Red and Superhedge

Paradise Rhaphiolepis | Oriental Pearl and Oriental Pink

Princess Magnolias | Princess Cleopatra, Princess Cinderella and Princess Little Sarah

Sensation Lavenders | Available in purple, blue, rose, pink and white

Lavish Lavenders | World-first double lavenders

Paradise Gardenias | Buttons, White Gold, Cupid, Tinkerbell, Jupiter and White Goddess.

PLANT INFORMATION

Oriental Pearl PBR *(Rhaphiolepis indica)* | The perfect landscaping Rhaph; naturally rounded, tidy shape, salt tolerant, full sun, spot-free leaves, tough, low borders or mass planting. White flowers in Spring.

Oriental Pink *(Rhaphiolepis indica* 'Rapopink' *PBR)* | Sister line to Oriental Pearl, featuring all the same attributes but with pink flowers and darker foliage.

Sensation™ Rose *(Lavandula pedunculata* 'Senros' *PBR)* | Year-round flowering. Tough, drought-hardy perennial, perfect for low colourful borders or mass planting. Thrives in dry or sloping sites, great in sandy soils, salt tolerant. Low maintenance, tolerant of heat and humidity. Sensation lavenders are available in purple, blue, pink, rose and white.

Super Red™ *(Photinia glabra* 'Parsur' *PBR)* | Upright growth combined with textured and colourful foliage makes this variety an ideal choice for quick and colourful screening. Tolerates a wide range of soil and climatic conditions.

Lavender Loveheart™ *(Lavandula pedunculata 'Senheart' PBR)* | Year-round flowering. Vigorous, upright and well branched, an ideal perennial to 0.75m. Perfect for low hedging, mass planting or as a garden/patio feature. Low maintenance and low water requirements. Tolerant of heat, humidity and salt.

Slimline™ With Love *(Camellia sasanqua 'Parlove" PBR)* | This spectacular Camellia is slender and upright, a perfect screening plant and ideal for narrow spaces. Once established, they are surprisingly drought hardy. Producing soft pink double flowers, they will flower all autumn long. Also available in other colours.

Slimline™ Avalanche *(Camellia sasanqua* 'Parava' *PBR)* | Beautiful, upright, bushy and slender, perfect for that narrow space. Hardy once established, it flowers early with an 'avalanche' of stunning white blooms. Also available in other colours.

Princess™ Cleopatra *(Michelia yunnanensis* 'Parcleo' *PBR)* | Quick, tidy evergreen growth habit and a multitude of magnificent perfumed flowers. Forms a tidy shrub or screen; flowering in spring and again in summer. Flowers contrast beautifully with the deep green, leathery foliage.

Paradise™ Caroline *(Camellia sasanqua* 'Parcaroline' *PBR)* | Just one of the varieties in the Paradise™ Camellia collection, bright pink-red flowers, upright and bushy. Beautiful and functional.

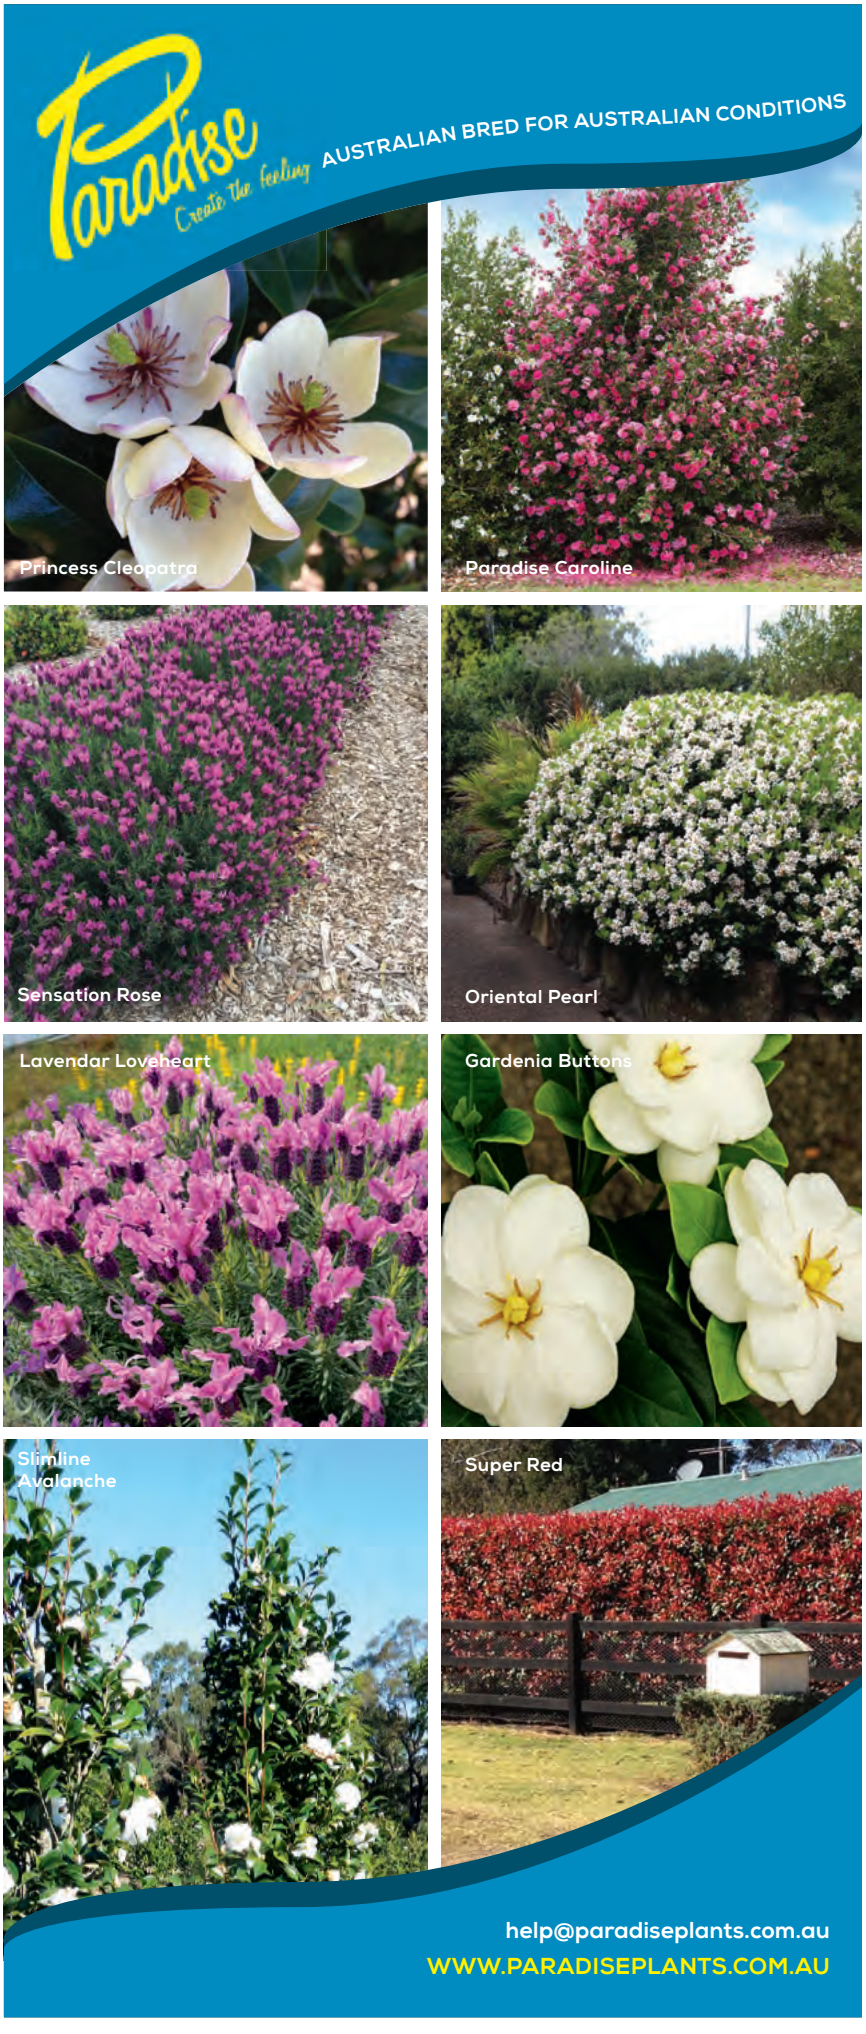

Paradise Gardenias | With extremely fragrant abundant blooms, these heat-tolerant, evergreen gardenias cover a broad range of applications including border and edge planting, mass garden planting and container planting.

MANSFIELD'S PROPAGATION NURSERY

WHOLESALE NURSERY SPECIALISING IN PROPAGATION

COMPANY PROFILE

Established in 1951, Mansfield's Propagation Nursery is a third generation family-run business. Initially operating at three separate sites, the nursery was consolidated in 1999 onto a single, purpose-built 60-acre site on the Mornington Peninsula, featuring a state-of-the-art propagation facility.

Widely recognised as one of Australia's leading propagation nurseries, Mansfield's has earned multiple consective accolades from the Nursery and Garden Industry of Australia (NGIA) between 2009 to 2012, including Best Propagation Nursery, Best Large Production Nursery, Best Environmental Business and Best Training Organisation.

This year Mansfield's will grow over six million plants, spanning more than 900 varieties, from native and exotic trees to shrubs, grasses, succulents, food crops and rootstocks.

Although Mansfield's does not oversee landscape planting or construction, it actively supports project managers with reliable greenlife supply and delivery scheduling to ensure contractors have the exact varieties they need, exactly when they need them.

PRODUCTS AND SERVICES

The nursery specialises in a broad selection of native and exotic ranges, including landscape varieties, revegetation plants and tissue culture varieties through its sister company, Tissue Culture Australia.

Mansfield's operates an Advanced Order system, allowing plants to be grown in specific quantities and scheduled timings to suit customer needs. This system accommodates contract growing across its full range of product sizes. *The latest Advanced Order booklet is available on the website under the Stock List tab.*

Alongside its Advanced Order service, Mansfield's also publishes a monthly stock list to assist specifiers in identifying current plant availability across the following categories:

- Austraflora range
- Succulent range
- Native range
- Exotic range
- Ozbreed range
- Rootstock range

To support a wide variety of project requirements, the nursery offers a diverse selection of product sizes:

- 209 grownet (bio-degradable)
- 144 grownet (bio-degradable
- 84 grownet (bio-degradable, tube equivalent)
- 50mm tube
- 55mm forestry
- 68mm tube
- 70mm air-pruned tube
- 140mm pot
- 143mm air-pruned pot
- 200mm pot
- 400mm air-pruned pot

Backed by more than 75 years of industry experience, Mansfield's continues to adapt to changing market demands. Its ongoing investment in innovation includes automated sticking lines, advanced vision grading systems, environmental sensors and ERP systems for real-time tracking and cost analysis. The nursery's ethos revolves around sustainability, water efficiency and product development, all of which guides its approach to industry evolution.

FLEMING'S NURSERIES

AUSTRALIA'S LEADING GROWER OF DECIDUOUS AND ORNAMENTAL, FRUIT AND NATIVE TREES, INCLUDING BARE ROOT, CONTAINER AND ADVANCED TREES

COMPANY PROFILE

Fleming's Nurseries is one of Australia's oldest and most comprehensive family-owned and operated production nurseries. With three production nurseries located in Victoria and two in Queensland, Fleming's offer trees and plants from TC to super advanced specimens.

With more than 100 years of horticultural experience and Australia's leading tree nurseryman, Wes Fleming, at the helm, Fleming's continues to grow and thrive, with research and development underpinning its growth and expansion in recent years.

Producing quality trees and shrubs from propagation to advanced growth required specialist growing knowledge and expertise, a practice Fleming's is proud to have championed in Australia. Today Fleming's trees and quality introductions are among the most sought after in the nation.

Fleming's includes a sourcing department with national outreach, which provides the ability to fulfil any order, whether we grow the stock or not, making it an easy one-stop-shop for planting programs large or small.

PRODUCTS AND SERVICES

Fleming's Nurseries stocks a comprehensive range of trees, including deciduous, ornamentals, weepers, natives and shrubs. Plants and trees are available as bare root stock, containers from 10cm to 40cm, and advanced trees from 25L to 1000L.

TALL TREES

WHOLESALE NURSERY

COMPANY PROFILE

Established in 1988, Tall Trees wholesale nursery grows advanced trees, natives and exotics, shrubs, grasses and ground covers across a 20-acre site in Balnarring, Victoria.

A family-owned business, Tall Trees has been supplying greenlife to the landscaping industry for over 30 years, and are 'the' contract growing specialist.

Experts in commercial, civil and municipal plant supply, Tall Trees produces trees and plants from 14cm groundcovers up to 5-metre feature trees.

PRODUCTS AND SERVICES

Tall Trees supplies and sources plants for domestic and commercial landscape projects of all sizes.

To ensure healthy root structures, all Tall Trees street trees are grown from direct seed in Rocket™ Pot technology — from germination to supply.

Tall Trees stocks an extensive range of Ozbreed and Foliage First stock, alongside a large range of other natives and exotics in a variety of sizes.

To ensure availability and best-price for project outcomes, Tall Trees offers contract growing services.

PLANTS DIRECT QUEENSLAND

WHOLESALE NURSERY

COMPANY PROFILE

Plants Direct Queensland is a leading production nursery that has been supplying quality plants to the landscape industry since 1982. Based on the Sunshine Coast in Queensland, the nursery's growing area covers 48 acres. All Plants Direct QLD stock is container grown and sun hardened to meet Australian Standard AS 2023 *Tree Stock for Landscape Use.*

PRODUCTS AND SERVICES

Tubestock 140mm–1000L | Specialists in Australian native and exotic landscape lines from revegetation tubestock, 140mm ground covers to 1000L street trees and super advanced architectural specimens. In addition to an extensive range of more than 500 species grown onsite, Plants Direct QLD sources plants from a network of over 100 reputable growers; allowing it to offer a complete plant procurement service from small residential projects to large commercial contracts.

Horticultural advice | Plants Direct QLD takes pride in producing quality greenlife and providing superior service and expert technical advice. The company's team of horticultural professionals have over 60 years of combined experience across all facets of the amenity horticulture and landscape industries. The sales staff all have qualifications in horticulture and are happy to provide advice on species selection, correct planting procedures, and maintenance routines.

Quality assurance | Using nursery industry best practice methods to produce greenlife of the highest standard, Plants Direct QLD is dedicated to high production standards to ensure longterm success in any landscape. All nursery stock complies with Australian Standards — *AS4373 Pruning of Amenity Trees, AS3743 Potting Mixes and AS2303:2018 Tree Stock for Landscape Use.*

Contract growing | Specialised contract growing services. With over 40 years of experience catering to commercial and government landscape projects across Queensland and NSW, Plants Direct QLD contract grows greenlife from 140mm to super-advanced sizes as needed.

Plant orders placed well in advance of project planting deadlines eliminates availability issues, the need for substitutes and the risk of inferior stock. Plants are guaranteed to arrive onsite at their optimum planting size, allowing for vigorous, healthy growth in the landscape.

KAREELA TREE FARM

SPECIALIST GROWER AND SUPPLIER OF ADVANCED EX-GROUND HOOP PINE TREES

COMPANY PROFILE

Kareela Tree Farm is a specialist grower and supplier of advanced field-grown Hoop Pine (Araucaria cunninghamii) for landscape, civic, development and infrastructure projects.

Located at Binna Burra in the Northern Rivers region of New South Wales, Kareela Tree Farm has developed a substantial resource of advanced Hoop Pines specifically managed for successful transplantation and long-term landscape performance.

The farm specialises in established trees that provide an immediate sense of scale, maturity and landscape impact. With trees available from approximately 4 metres through to 10 metres in height, Kareela provides landscape architects, councils, developers and contractors with the opportunity to give projects many years head start compared with conventional nursery stock.

PRODUCTS AND SERVICES

Hoop Pine is an iconic Australian native tree valued for its distinctive architectural form, longevity and adaptability to a wide range of landscape applications.

Kareela Tree Farm supplies advanced ex-ground Hoop Pines for projects including:

- Parks and public open spaces
- Streetscapes and civic landscapes
- Residential and commercial developments
- Resorts and tourism projects
- Schools and institutional landscapes
- Infrastructure and urban renewal projects
- Feature and avenue planting
- Major legacy landscape projects

Trees are generally available in three height categories: 4–6 metres, 6–8 metres and 8–10 metres, subject to individual tree selection and availability.

Kareela works with landscape architects, landscape contractors, developers, councils and wholesale nurseries to assist with tree selection, project programming, harvesting, delivery planning and transplanting.

Trees can also be selected and reserved in advance, enabling project teams to secure suitable stock and coordinate harvesting and delivery with future construction and landscape programs.

COMPOSITION AND PRODUCTION

Kareela's Hoop Pines are field-grown rather than container-grown, allowing the trees to establish naturally in the ground before being selected for transplantation.

Trees are mechanically harvested using specialist tree-spade equipment to produce a cohesive root ball. Each root ball is prepared using hessian and a purpose-built wire basket to provide stability and protection during lifting, transport and installation.

Kareela has invested significantly in specialist tree harvesting, handling and root-ball preparation equipment, allowing the farm to manage harvesting in-house and maintain greater control over tree preparation, quality and project scheduling.

Detailed planting, establishment and maintenance guidance is also available to assist contractors and clients following delivery.
